
BazaarNXT: B2B Procurement Platform

Industry	B2B Marketplace
Designation	Product Designer
Focus areas	B2B Procurement, Logistics, Order Management, Supply Chain Mgmt
Tools Used	Adobe After Effects, Figma, Google Docs

Project Summary: Developed the BazaarNXT App to revolutionize B2B packaging materials procurement. We created a user-friendly digital marketplace, streamlined the ordering process, and improved overall efficiency for businesses sourcing packaging materials.

About BazaarNXT App

BazaarNXT aims to revolutionize the B2B packaging materials industry by transitioning from traditional offline methods to an innovative online marketplace. Our goal is to address common challenges businesses face when sourcing packaging materials.

Currently, many businesses in the packaging industry struggle with:

- Difficulty finding reliable suppliers
- Inconsistent product quality
- Delayed deliveries
- Time-consuming procurement processes

These issues often lead to operational inefficiencies and customer dissatisfaction.

BazaarNXT developed a digital solution to streamline these processes. Our upcoming online platform offered.

- A wide range of packaging options
- Rigorous quality control measures
- Efficient ordering and delivery systems
- Direct connections with verified suppliers
- A user-friendly mobile application

By digitizing the packaging procurement process, BazaarNXT aims to help businesses save time and money. Our vision is to become the go-to platform for companies seeking to modernize their packaging supply chain, enabling them to operate more efficiently and successfully in an increasingly digital business landscape.

My Role

As Product Designer, I led the design of BazaarNXT's B2B ecommerce app for packaging materials. My key responsibilities included:

- Conducting user research and stakeholder interviews with B2B customers and internal teams
- Identifying and prioritizing pain points in the current offline procurement process
- Developing user-friendly design solutions for online product discovery and ordering
- Creating and testing prototypes with B2B customers of varying tech literacy levels
- Collaborating with development and business teams to ensure successful implementation of the digital platform

Defining Problem Statement

Problem Statement: Currently, B2B customers in the packaging materials industry rely on traditional offline methods for procurement, leading to inefficiencies, quality inconsistencies, and time-consuming processes. The BazaarNXT App, which is under development, aims to address these challenges by providing a digital solution.
How Might We Statement: How might we design the BazaarNXT App's interface to be intuitive, user-friendly, and efficient for B2B customers with varying tech literacy levels and industry-specific needs, while streamlining the online product discovery and purchasing process for packaging materials?

Stakeholder Interviews

For this case study, I conducted stakeholder interviews with the CEO, COO, and field sales team of BazaarNXT to understand the pain points and needs of our B2B customers in the packaging materials industry. Through these interviews and field visits, we identified several significant issues affecting our platform's usability and effectiveness.

Key findings from stakeholder interviews :

- CEO emphasized the need for a digital platform to streamline the currently offline ordering process
- COO highlighted the importance of incorporating real-time inventory updates and order tracking features in the app
- Field sales team reported that businesses struggle to efficiently browse and find specific packaging materials in the current offline system
- Customer success team noted frequent inquiries about order status and delivery timelines, suggesting a need for in-app notifications
- Both management and sales team observed that smaller businesses need an intuitive, user-friendly interface to easily transition from offline to online ordering
- Sales representatives stressed the importance of designing a simple, accessible app interface to attract and retain less tech-savvy business owners

Ideation & Goals

We identified a significant challenge affecting both BazaarNXT and our B2B customers in the packaging materials industry. Through extensive field visits and stakeholder interviews, we validated the authenticity of this issue. Subsequently,

we initiated the process of exploring potential solutions. This approach demonstrates our commitment to addressing real-world problems with practical, user-centric solutions.

1. The solution should be intuitive and user-friendly, catering to B2B customers with varying levels of tech literacy.
2. The app's features should be easily discoverable for busy business owners and procurement managers.
3. The design should be consistent with BazaarNXT's brand identity and existing digital platforms.

Design Process

For the BazaarNXT app, we followed a comprehensive design process to ensure we created a user-friendly and efficient solution for B2B customers in the packaging materials industry. Our process included the following key stages:

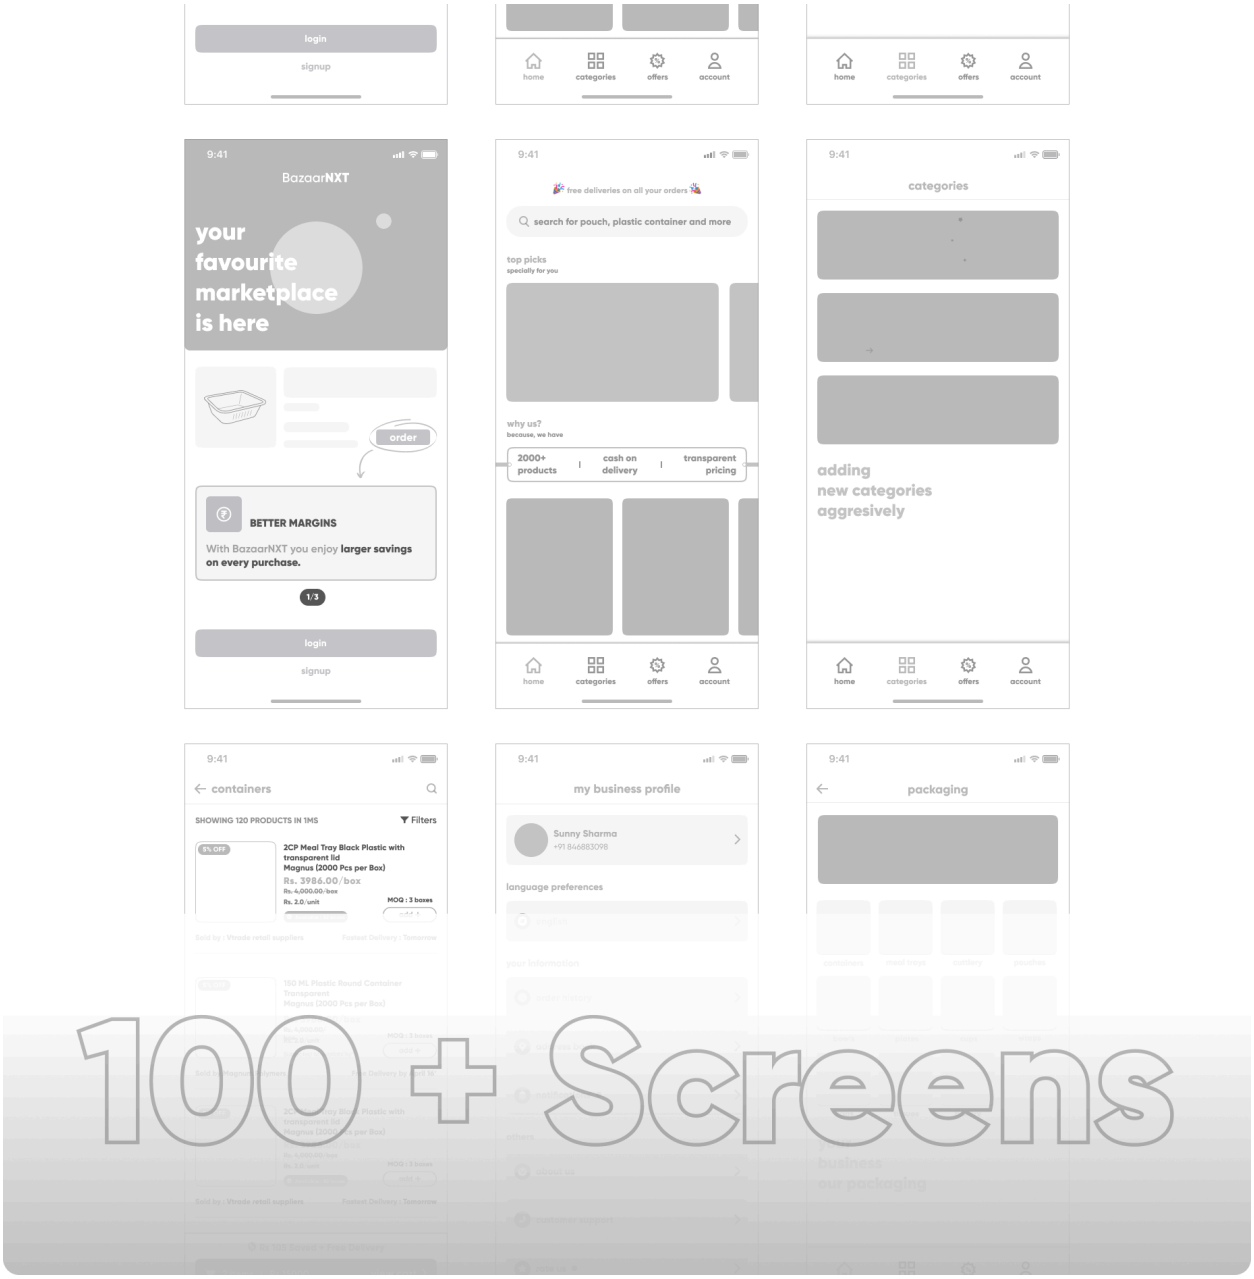
1. **Research and Discovery:** Conducted stakeholder interviews, field visits, and market analysis to understand the unique needs and pain points of B2B customers in the packaging industry.
2. **Problem Definition:** Synthesized research findings to clearly define the core problems and opportunities for improvement in the B2B packaging procurement process.
3. **Ideation and Conceptualization:** Brainstormed multiple solutions and design concepts, focusing on creating an intuitive and efficient digital marketplace for packaging materials.
4. **Wireframing and Prototyping:** Developed low-fidelity wireframes and interactive prototypes to visualize the app's structure and core functionalities.
5. **Visual Design:** Created high-fidelity designs that aligned with BazaarNXT's brand identity while ensuring a user-friendly interface for B2B customers with varying tech literacy levels.

Throughout this process, we maintained a user-centered approach, consistently referring back to our persona and the specific needs of B2B customers in the packaging materials industry. This ensured that the final product would effectively address the challenges identified in our initial research and provide a valuable solution for our target users.

Wireframes

After finalizing the information architecture (IA), I created wireframes for the BazaarNXT App, keeping our target persona - less tech-savvy but time-constrained B2B buyer - at the forefront of my design decisions. These wireframes served as a blueprint for the app's structure and functionality, emphasizing intuitive navigation and efficient product discovery.

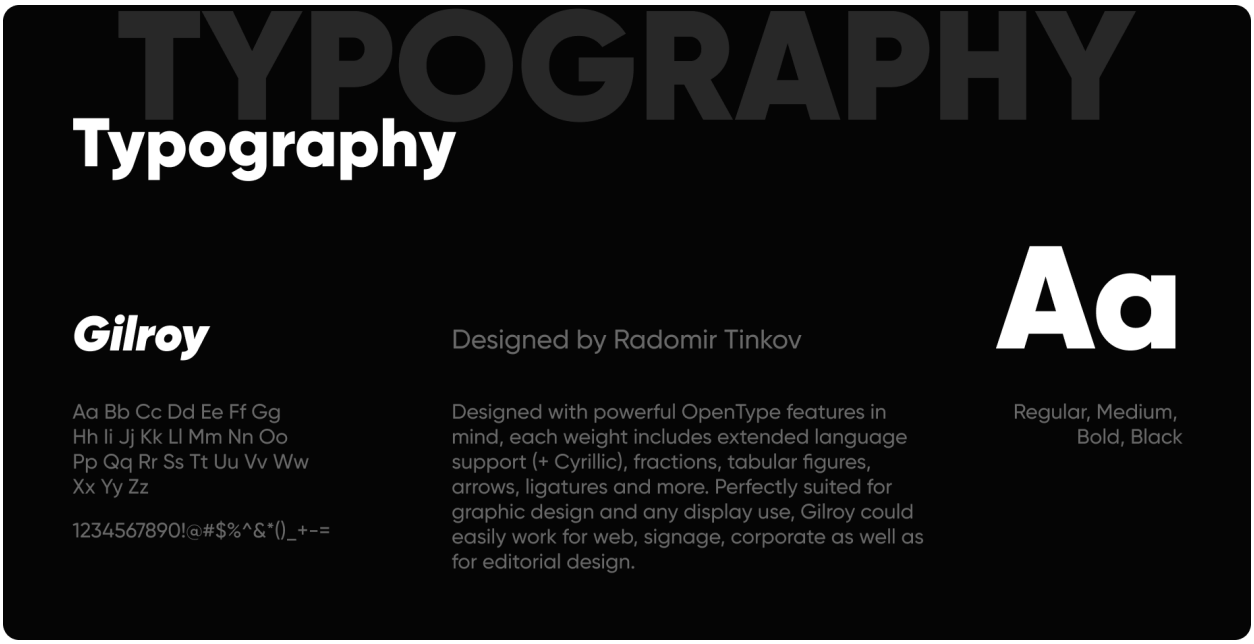
Once the wireframes were approved, I progressed to the visual design stage. Here, I focused on creating an aesthetically pleasing and user-friendly interface that not only aligned with BazaarNXT's brand identity but also catered to the specific needs of our B2B customers in the packaging materials industry. This involved incorporating elements that would appeal to our persona, such as clear product categorization, prominent search functionality, and easy-to-use order management features.



Visual Design

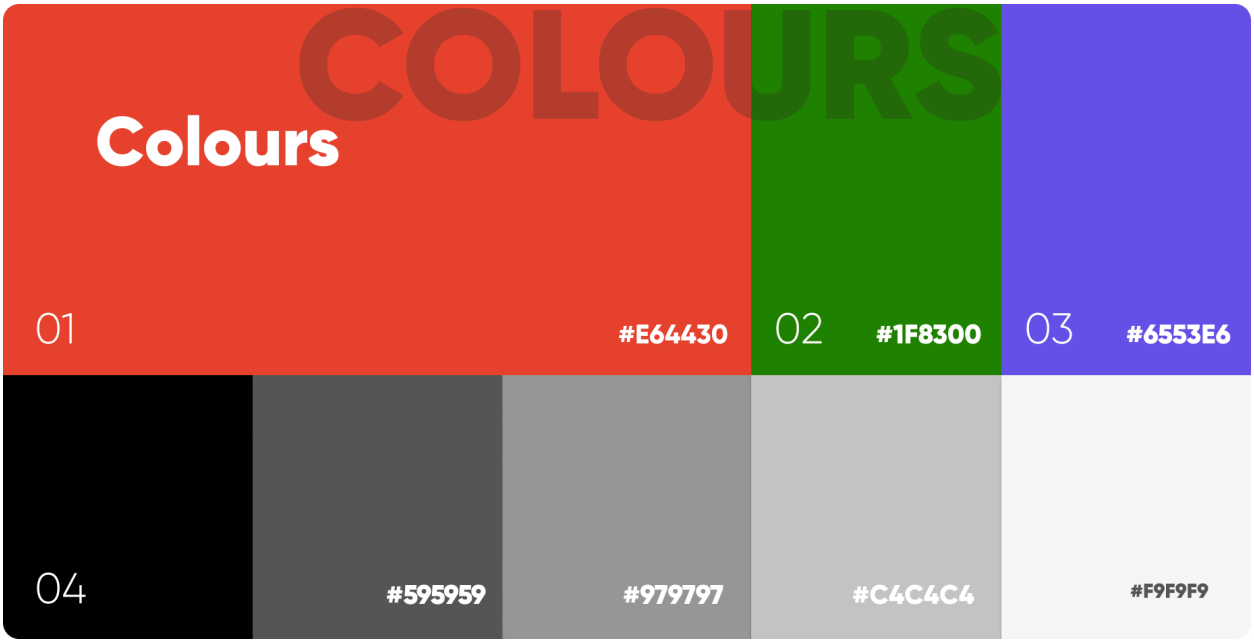
After completing the wireframes and visual design, I focused on creating high-fidelity mockups for the BazaarNXT App. These mockups incorporated the approved visual design elements and brought the wireframes to life with detailed UI components, color schemes, and typography. The goal was to create a

polished, professional look that would resonate with our B2B customers while maintaining ease of use.



Colours

The color palette for the BazaarNXT App was carefully selected to align with our brand identity and create a visually appealing interface for our B2B customers. We chose a combination of bold and muted tones to strike a balance between professionalism and user-friendliness. The primary colors, including shades of blue and orange, were chosen to evoke trust, reliability, and energy – qualities that are essential in the B2B packaging materials industry.



UI Design

The UI design for the BazaarNXT App focused on creating an intuitive and efficient interface for our B2B customers. We prioritized easy navigation, clear product categorization, and streamlined ordering processes. The design incorporated large, easily tappable buttons, prominent search functionality, and a clean layout to accommodate users with varying levels of tech literacy.

Conclusion

The BazaarNXT App project transformed the B2B packaging materials industry. We moved from offline methods to an online marketplace, solving major problems in sourcing packaging materials. Our user-focused design, thorough research, and step-by-step development created an easy-to-use platform that makes buying packaging materials much simpler for B2B customers.

Thank you
